↻ EDUCATION ↻

- Ph.D. (2014) Computer Science, University of Minnesota.
Advisers: John T. Riedl and Joseph A. Konstan
- B.S. (2007) Computer Engineering, Iowa State University.

↻ EMPLOYMENT HISTORY ↻

- 2023–present **Assistant Professor**, Dept. of Information Science, *Drexel University*
PI/Lead, Impact, Novation, Effectiveness, and Responsibility of Technology for Information Access Lab (INERTIAL)
- 2022–2023 **Associate Professor**, Dept. of Computer Science, *Boise State University*
Co-director, People and Information Research Team (PIReT)
- 2016–2022 **Assistant Professor**, Dept. of Computer Science, *Boise State University*
Co-director, People and Information Research Team (PIReT)
- 2014–2016 **Assistant Professor**, Dept. of Computer Science, *Texas State University*

↻ STUDENTS ↻

CURRENT PH.D. STUDENTS

- ▶ **Samira Vaez Barenji** (expected 2029)
- ▶ **Sushobhan Parajuli** (expected 2029)

PH.D. GRADUATES

- ▶ **Ngozi Ihemelandu** (Ph.D. 2024, Boise State University; dissertation: *Best Practices for Offline Evaluation for Top-N Recommendation: Candidate Set Sampling and Statistical Inference*)
- ▶ **Amifa Raj** (Ph.D. 2023, Boise State University; dissertation: *Fair Layouts in Information Access Systems: Provider-Side Group Fairness in Ranking Beyond Ranked Lists*)

M.S. GRADUATES

- ▶ **Srabanti Guha** (M.S. 2023, Boise State University; project: *Explaining Misallocated Exposure across Multiple Rankings*)
- ▶ **Carlos Segura Cerna** (M.S. 2020, Boise State University; project: *Recommendation Server for LensKit*)
- ▶ **Mucun Tian** (M.S. 2019, Boise State University; thesis: *Estimating Error and Bias of Offline Recommender System Evaluation Results*)
- ▶ **Vaibhav Mahant** (M.S. 2016, Texas State University; thesis: *Improving Top-N Evaluation of Recommender Systems*)
- ▶ **Sushma Channamsetty** (M.S. 2016, Texas State University; thesis: *Recommender Response to User Profile Diversity and Popularity Bias*)
- ▶ **Mohammed Imran R Kazi** (M.S. 2016, Texas State University; thesis: *Exploring Potentially Discriminatory Biases in Book Recommendation*)

- ▶ **Shuvabrata Saha** (M.S. 2016, Texas State University; co-advised with Dr. Apan Qasem; thesis: [A Multi-objective Autotuning Framework For The Java Virtual Machine](#))

UNDERGRADUATE STUDENT RESEARCH

I have supported and mentored the following undergraduate research students: Christine Pinney (BSU, UGRA + REU), Liana Shiroma (Colby Coll., REU 2021), Stephen Randall (U. Pitt, REU 2021), Connor Wood (BSU, REU 2020 + UGRA), Ananda Montoly (Smith Coll., REU 2020), Sandra Ambriz (BSU, HERC + UGRA).

Funding key:

- ▶ UGRA: undergraduate research assistant hired from research funds
- ▶ REU: Research Experience for Undergraduates
- ▶ HERC: Higher Education Research Consortium

⌘ RESEARCH FUNDING ⌘

EXTERNAL GRANTS // 2 // \$664K

2023–2026 Collaborative Research: CCRI: New: A Research News Recommender Infrastructure with Live Users for Algorithm and Interface Experimentation (NSF 22-32553) (\$1.4M; Drexel PI, my share \$150K; Lead PI Joseph A. Konstan, UMN).

2018–2025 CAREER: User-Based Simulation Methods for Quantifying Sources of Error and Bias in Recommender Systems (NSF 17-51278) (\$514K incl. REU supplements; PI; \$43,598 brought to Drexel).

INTERNAL GRANTS // 2 // \$27K

2017 Boise State College of Education Civility Grant: LITERATE: Locating Informational Texts for Engaging Readers And Teaching Equitably (\$19K; co-PI; with PI Katherine Wright & co-PI Sole Pera).

2014 Texas State University Research Enhancement Program (competitive internal research grant): Temporal Analysis of Recommender Systems (\$8K; PI).

SOFTWARE AND DATA

I have built several open-source software packages and data sets in the course of my research and other work. Open-source software distribution and open data are key pieces of my research dissemination strategy. My most significant development efforts are:

- ▶ **LensKit**, a toolkit for building, researching, and studying recommender systems. As of October 2025, the Python version (2018–) has been used in **117 papers**, theses, and educational resources, including the PBS show *Crash Course AI*. It has been downloaded over **72K times** from the Python Package Index in the last 12 months (according to PyPIStats). The original Java software (in development 2010–2018) is known to be used in **71 publications** and was used by over **2500 students** to complete programming assignments in the Recommender Systems MOOC.

The current version is 2025.6.3, released on Jan. 15, 2026. It is the 35th release of LensKit for Python. Home page: <https://lenskit.org>.

- ▶ **Book Data Tools**, software tools to integrate multiple public sources of book and book consumption data into a data set for studying social effects in book publication, reading, and recommendation. Used in UMUIA21 and RecSys18. <https://bookdata.inertial.science>

Active Supporting Packages

My work has also produced a number of utility packages to support this software and other efforts, including:

- **friendly**, a Rust package for rendering human-friendly numeric quantities with significant digits, auto-scaling SI and binary prefixes, etc. <https://github.com/mdekstrand/friendly>
- **happylog**, a Rust package for easily configuring log output for command-line programs. <https://github.com/mdekstrand/happylog>
- **hyperstatic**, a TypeScript library for generating static HTML or XML with JSX or a HyperScript-like API. <https://npmjs.com/package/@mdekstrand/hyperstatic>
- **hbsinterp**, a TypeScript interpreter for Handlebars templates optimized for content templating. <https://npmjs.com/package/@mdekstrand/hbsinterp>

Discontinued / Archived Packages

These packages spun out of the work above, but I am no longer actively maintaining them.

- **seedbank**, a Python package for consistently seeding random number generators. The scientific Python community has settled on a different approach (SPEC 7), which I have also now adopted. <https://seedbank.lenskit.org>
- **csr**, a Python package for managing sparse matrices in CSR format compatible with the Numba JIT for scientific python, and with Intel MKL acceleration for several operations. LensKit now uses PyTorch sparse tensors instead. <https://csr.lenskit.org>
- **binpickle**, a Python package for saving scientific data structures (such as machine learning models) to disk in either compressed or memory-mappable format. LensKit used to use this package to serialize models for both storage and shared-memory parallelism; discontinued in favor of more widely-used tools like Ray, zarr, and safetensors. <https://binpickle.lenskit.org>
- **Grapht**, a dependency injection framework for Java with novel configuration and static analysis capabilities (paper J4). <http://grapht.grouplens.org>
